Professional Summary

Computer Programming and Analysis student at Durham College with hands-on experience in full-stack applications, REST APIs, databases, authentication, Docker, debugging, and automated testing. AWS Academy Cloud Foundations graduate seeking a technical field placement or junior opportunity in software development, backend systems, QA, or application support.

Technical Skills

Languages: Java, Python, C#, TypeScript, JavaScript, PHP, SQL
Web: React, Node.js, Express, React Router, Vite, HTML, CSS, Bootstrap
Backend: REST APIs, CRUD, JWT, RBAC, HTTP Status Codes, Prepared Statements, Request Validation, Error Handling, Rate Limiting, API Integration
Databases: PostgreSQL, MongoDB, MySQL, Microsoft SQL Server
Tools/Deployment: Docker, Docker Compose, AWS Academy Cloud Foundations, Vercel Serverless Functions, Git, GitHub, GitLab, CI/CD, Cloudinary
Testing: TDD, PHPUnit, Debugging, Troubleshooting, Unit Testing, Integration Testing

Projects

Interactive Recipe Book V2 Jan 2026 – Present
Full-Stack Web Application *React 19, Node.js, MongoDB, Cloudinary*

- Migrated 50+ recipes to MongoDB using serverless REST APIs, supporting persistent data across web and Android platforms.
- Implemented JWT, bcrypt, and Google Sign-In authentication across 10+ API endpoints, with server-side favoriting and Cloudinary uploads.
- Optimized React Router and serverless API calls, eliminating 100% of redundant requests and MongoDB queries to prevent state resets and serverless cold-starts.
- Resolved 10+ API connectivity and CORS issues affecting serverless functions and mobile packaging.
- Implemented live search and category filtering with a 300ms input debounce.

Live Demo: interactive-recipe-book-v2.vercel.app

Enterprise Web Development Jan 2026 – Apr 2026
REST API, Authentication, and Access Control *PHP, Node.js, PostgreSQL, Docker*

- Developed a PHP mail-management REST API with five CRUD endpoints, PostgreSQL, prepared statements, and HTTP status codes.
- Implemented HS256 JWT authentication and RBAC for administrator and regular-user roles in a PHP/Node.js Docker Compose application.
- Added request logging, UUID trace IDs, rate limiting, and centralized error handling.
- Wrote PHPUnit 10 tests for the PostgreSQL data-access layer using test-driven development.

Super Mario Bros – 2D Platformer Jan 2026 – Apr 2026
Academic Team Project *C#, Unity, Object-Oriented Programming*

- Engineered gameplay across 4 scenes, including player movement, enemy AI, collision detection, and state management using Unity 6 and C#.
- Implemented score tracking, lives, level progression, restart functionality, and a persistent leaderboard.
- Integrated 5+ Unity features: New Input System, custom physics, Rigidbody2D extensions, Mecanim animation, and modular prefabs.
- Built a JSON leaderboard storing 10+ high scores from coins, enemies, and time bonuses.
- Applied Singleton, Factory, and State patterns to improve game-system maintainability and extensibility.

Work Experience

Amazon Canada – FC Associate, L1 Nov 2024 – Present
Fulfillment Operations *Whitby, Ontario*

- Process inventory accurately and safely while meeting productivity standards in a high-volume fulfillment environment.
- Coordinate with team leads and associates to resolve operational issues and meet workflow targets.
- Follow standard operating procedures for safe, precise inventory handling; contributed to zero safety incidents in the assigned work zone.
- Communicate with colleagues and leadership to support teamwork and daily operations.

Education

Durham College Sep 2024 – Apr 2027
Advanced Diploma in Computer Programming and Analysis *Oshawa, Ontario*

Overall GPA: 3.85/5.00
Relevant Coursework: Web Development, Database Systems, Programming Fundamentals

Certifications

AWS Academy Graduate – Cloud Foundations | Cloud Computing: Store, Deploy & Secure
